

AM DEVIATION

AM SYSTEM

If you're in control of your affairs, you'll save time and money.

In most businesses there are matters which must be handled in different ways by different people. But they must neither end up as dead ends nor take up too much time and resources. AM Deviation makes the processes for these various matters much more efficient, makes them simpler to handle, and most of all, makes the overview much more clear.

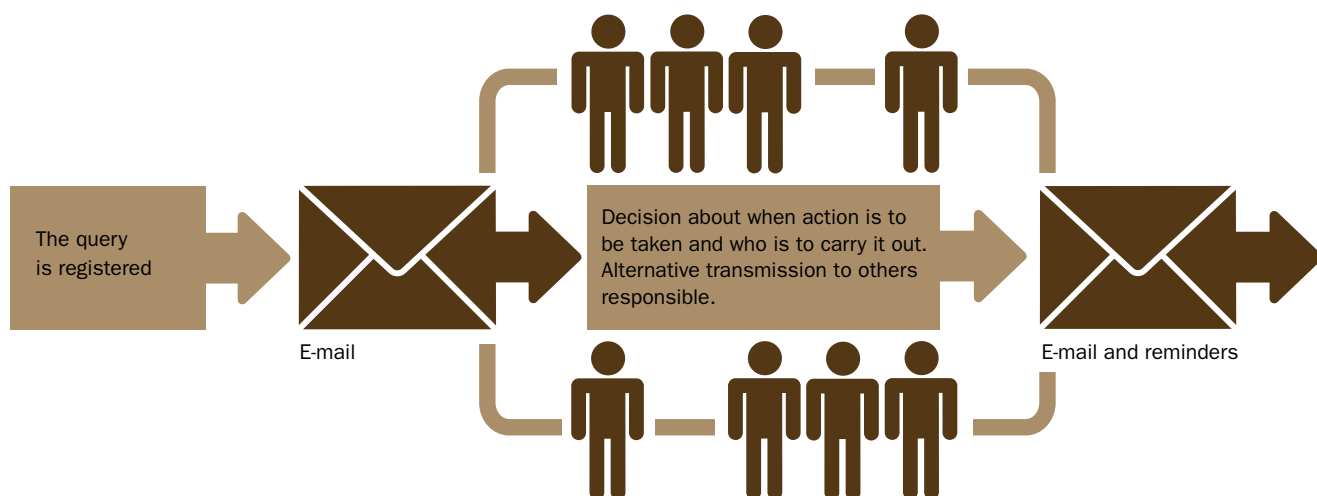

All matters are registered and are handled in a thorough fashion using a user-friendly web page interface, which contributes to less faults and higher quality. AM Deviation exists in two versions – Pro and Light. Pro includes five reports and Light includes one. More can be created when ordering.

Three steps to completion

The registration is in three steps: the first is issuing, the second planning/action, and the third the follow-up/verification step. The first step is to designate the recipient, the type, and the scope for the query. The recipient can use e-mail messages to link himself to the system and to process/re-transmit the current query. Finally there remains the follow-up with reminders, costs and verification of the query. The e-mail function which is built into the system minimises the risk that anything is forgotten. Besides the registration and handling of queries there are functions for searching, sorting and the collation of statistics which is supplied with graphs, export files and printouts.

Less handling of paper

The program is developed from and adapted to ISO-certified companies, and answers to the demands of quality control. The system is web based and can easily be adapted to specified demands such as tailor-made reports and functions. The introduction of AM Deviation in your company will reduce the time needed for administrative processes. The result is lower costs and higher quality for the whole business.

AM Deviation because:

- No query gets lost.
- It is user-friendly which encourages greater usage.
- It is simple to introduce.
- Good value and does not need installing at agreement.
- Web-based and platform-independent.
- Will easily adapt to your operations.
- Statistics and follow-ups.
- Up to ten different languages.

To be used for:

- Deviations in production.
- Deviations in revisions.
- Deviations with suppliers.
- Suggestions for improvement.
- Occurrences and incidents.
- Complaints.
- Customer opinions.
- Management activities.

System platform

AM Deviation can be used on its own, but may also be connected within a common platform to other products from AM System. Here, everything is handled where information from separate sources is in common for the user. Users are registered with different permissions and are connected to menus, a start page and languages. The aim is to make the company's quality control more efficient with improved routines and increased access. AM Deviation will be delivered with your company graphics free of charge.

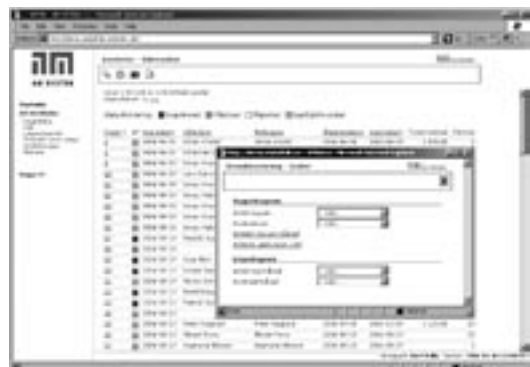

Overview (my page) Shown here: "My ongoing queries as issuer, receiver and verification authoriser," as well as: "The latest 30 registered". The coloured squares show the current status and will deliver further information if you click on them.

You will create and maintain your forms and/or reports in the setup page. You may choose which fields and hanging menus you wish to publish and use.

Create statistics from settings, and search results statistics are created with graph illustrations among other things.

Support for decisions, and the follow-up and verification of the query.
