

AM MAINTENANCE

AM SYSTEM

Reviews and maintenance without making it difficult.

AM Maintenance is a user-friendly, web-based maintenance program with great possibilities for adoption. All the data about every machine and tool in your business which requires continuous supervision and service is registered here. Maintenance lists are automatically generated and all actions taken are noted for following up. AM Maintenance gives you the total control of service and preventive maintenance as well as the calibration of all of your machinery.

Easy to grasp and simple to use

The navigation in AM Maintenance is with entries and tabs that are easy to use even for unskilled computer users. The program is web-based and therefore simple to introduce. There are no further program licenses or installations needed to use the system. Thanks to the various possibilities for handling languages and access, it is easy to adapt AM Maintenance to your operations.

AM Maintenance because:

- It is user-friendly which simply invites usage.
- It is simple to introduce.
- Good value and does not need installing at agreement.
- Web-based and platform-independent.
- Will easily adapt to your operations.
- Statistics and follow-ups.

Used for the control of:

- Maintenance (eg. preventive, corrective, calibration).
- Error reports.
- Who will perform the service.
- What is to be done.
- Spare parts required/Spare parts used.
- Time estimates.
- Costs.
- History.
- Follow-ups.

System platform

AM Maintenance can be used on its own, but may also be connected in a common platform with other products from AM System. Here, all common issues are handled for users. Users are registered with different permissions and are connected to menus, a start page, and languages. The aim is to make the company quality control more efficient with improved routines and increased access. AM Maintenance will be delivered with your company graphics free of charge.

Overview (my page) The overview page shows: "Mine or the group's current maintenance", "Mine or the group's current error messages", "Parts to be ordered" and "Delayed maintenance".

Point of entry Object is the base for AM Maintenance. Here all information about the objects are registered with name, serial number, place, manufacturer, place of manual, supplier, etc. By subsequently sorting these into main and sub-objects, a structure with an unlimited number of levels is created. This structure may be opened in its own window and used for navigation.

Creating statistics: from the settings and search results statistics are generated with graphs, among other things.
